TIMJAN – Magnelis Material

What is MAGNELIS?

Magnelis is an exceptional metallic coating which provides a breakthrough in corrosion protection.

Magnelis is also the best choice for a wide variety of applications.

Thanks to its unique composition, Magnelis provides an unprecedented level of surface and cut-edge protection, even in the most hostile environments.

Magnelis is produced on a classic hot dip galvanising line, but the molten bath has a unique chemical composition including zinc, 3.5% aluminium, and 3% magnesium.

Magnelis resists corrosion for longer than standard galvanised products and it outperforms coatings containing less magnesium.

TIMJAN – Magnelis Material

Main advantages

- Excellent corrosion resistance: three times better than galvanised steel (based on outdoor tests)
- Self-healing effect ensures excellent edge protection
- Best and most cost-effective alternative to post-galvanised steels
- Excellent processing properties
- Environmentally friendly
