

Umbrellas

A classic design built from long-lasting materials. The fabric is highly durable and Teflon treated, which makes it water and dirt repellent. A double-pulley system makes it easy for everyone to fold up the umbrella.

UV-protection: UPF50+, which is the maximum sun protective rating achievable for fabrics.

The pole is made of Kapur which is a strong, durable type of wood – making it the perfect choice for parasol poles. The parasol pole has been lacquered. It comes in a variety of warm colours and does not patinate much due to its treatment. It is important that the parasol is fitted in a stable umbrella foot to prevent damages on the pole. Always make sure the chosen size of parasol is compatible with the strength and weight of the umbrella foot.

During the winter it is advisable to store the parasol in an unheated room such as a garage or cellar. However it is possible to leave the parasol outside all year round if using a cover.
